Hydro Dynamics Partner in Italy Creates SPR Test Lab

Rome, GA- Hydro Dynamics, Inc. (HDI) of Rome, Georgia (www.hydrodynamics.com) partner Three-Es S.r.l. of Milan, Italy (www.reattorespr.it) has created a test lab area specifically for running materials for potential SPR customers. During its short existence it has already been used for testing the biogas application and numerous chemical application tests. The facility is adjacent to the Three-Es office in Milan and provides a convenient place for customers to see the ShockWave Power technology.

“We are so pleased with the investment Three-Es has made in the SPR technology with the creation of this test lab”, said Doug Mancosky, VP of R&D for HDI. “The lab has already yielded great new applications for new customers and we’re very excited about the future.” A great video of the lab and SPR in action can be found on the Three-Es YouTube page (http://www.youtube.com/watch?v=bYBdtgRCF_U).
